(919) 756-0816 | fxassermohamed@gmail.com | Raleigh, NC | [linkedin.com/in/fxasser](https://www.linkedin.com/in/fxasser) | github.com/fxasser | fxasser.com

EDUCATION:

North Carolina State University

B.S. Computer Science | GPA 3.33

Raleigh, NC

Aug 2023 – May 2027

Relevant Coursework: Operating Systems (CSC 246, in progress), Software Development (CSC 216/217), Data Structures & Algorithms (CSC 316), C & Software Tools (CSC 230), Automata (CSC 333), Python (CSC 251)

EXPERIENCE:

Veradigm

Raleigh, NC

DevOps Intern (*full-time summer; extended part-time through May 2027*)

May 2026 – Present

- Build and maintain AWS deployment infrastructure with Amazon EKS (Kubernetes), Terraform, and ArgoCD GitOps workflows; stood up and operate a dedicated EKS cluster for development and testing
- Reworked a GitHub Actions deploy-to-development workflow so runner changes reach dev/test environments without a pull request, cutting iteration time while production deploys stay review-gated
- Develop integrations against the company's internal generative-AI assistant API, including a team-chat bot that brings the assistant into engineers' daily workflow

Freelance 3D Model & Printing Services

Smithfield, NC

3D Prop Artist

Oct 2022 – Present

- Design, model (CAD and digital sculpt), and print custom props on commission for cosplayers, photographers, and vendors
- Run each job end to end: design pitch and quote, iterative client check-ins, then assembly, priming, painting, and finishing

PROJECTS:

Self-Hosted Homelab & Web Infrastructure | *Ubuntu 24.04, Docker Compose, Nginx, Tailscale*

fxasser.com

- Administer an Ubuntu server running 10+ containerized services, including Immich and Nextcloud (each backed by PostgreSQL and Redis), Jenkins, code-server, Pi-hole, Uptime Kuma, and custom web apps
- Route custom subdomains through an Nginx reverse proxy with TLS; restrict access with UFW rules and a Tailscale VPN; monitor service health with Uptime Kuma
- After a power-loss incident, added nightly rsync/cron and Timeshift backups to a separate SSD and verified restores; since recovered from boot (GRUB), mount (fstab), and 502 proxy failures
- Traced bots failing after reboot to Tailscale MagicDNS overriding the host resolver; fixed with a targeted config change that kept the VPN intact

Discord Community Automation Bots | *Python, asyncio, Docker*

- Onboarding bot: assigns roles, validates member introductions, and gates server access, with admin slash commands and a backfill mode for existing members
- Voice-channel bot: tracks sessions and pings an opt-in role once 2+ members stay ~20 s, with cooldowns to prevent repeat alerts; both run 24/7 in Docker

AccessControlManager Demo | *Spring Boot, Nginx*

accesscontrolmanager.fxasser.com

- Built a Spring Boot REST API for compliance report generation over validated preset CSV datasets, publishing a clean API layer while keeping course logic private
- Deployed UI and API behind one HTTPS subdomain via Nginx path routing (/ to frontend, /api to backend)

WolfReview & Team Java Development | *Java, JUnit, Jenkins*

CSC 216/217, CSC 316

- Built a finite-state conference-paper tracker with invariant checks and on-disk serialization; held ≥80% line / ≥70% branch coverage under Jenkins CI with Checkstyle, PMD, and SpotBugs gates
- Shipped weekly features in a team via tickets and PR reviews; wrote JUnit suites that pass Jenkins mutation-testing gates for graph and search-tree data structures

MAYDAY | *Twine, Docker, Nginx*

Class project

- Wrote a branching browser game with hidden state variables driving multiple endings; containerized it with nginx:alpine and deployed it on my homelab

SKILLS:

Cloud & DevOps: AWS, Amazon EKS, Kubernetes, Terraform, ArgoCD, GitHub Actions, Jenkins, Docker, Docker Compose, CI/CD

Linux & Networking: Ubuntu Linux, Bash, Nginx, reverse proxies, TLS/HTTPS, DNS, Tailscale, UFW, SSH, cron, rsync

Languages: Java, Python, C, C++, JavaScript, HTML/CSS

Backend & Services: Spring Boot, REST APIs, Maven, PostgreSQL, Redis

Practices: Git, JUnit and mutation testing, static analysis (Checkstyle, PMD, SpotBugs), UML, Agile (Jira)
